

## Directional Antenna

---

A Directional Antenna is best utilized in areas of poor cellular coverage in order to boost the signal and data speeds. The Antenna attaches directly to the terminal port on the back of the Camera housing and mounts to the same pole that the Camera is mounted to. Simply by pointing the Antenna towards the closest tower, the signal strength and data speeds drastically increase.

Gain: 18dBi

Beam Width: 80

Weight: 1.6lbs (720g)

Length: 10in (25cm)

Width: 3in (8cm)
