

Remote 1-Way Sensor

The Remote 1-Way Sensor is an additional motion sensor that is placed within 250ft (12m) of the Camera for additional detection area. This device is used to pre-trigger the Camera to take video/images from longer distances. The Remote 1-Way Sensor is powered by a 9V battery (2 year charge) and is triggered by changes in thermal activity focused on Human or Vehicle identification. The Camera provides a local wireless network that communicates to as many Remote Sensors within the network radius.
