

## ⚙️ INSTALLATION ACCESSORIES

### Barrel Mounting Pole

Designed for the Ranger camera series, the Barrel Mounting Pole is a portable temporary installation solution. Once filled, the 55-gallon (208 L) barrel base can withstand hurricane-force winds while keeping the camera secure at the optimal height for motion detection.

### Universal Pole Mount

Ideal for cylindrical poles that lack a flat surface, the Universal Pole Mount provides a convenient solution for mounting Eye Trax cameras.

### Modular Pole System

Once secured with cement at the desired location, the Modular Pole System serves as a permanent installation solution that keeps the camera at the optimal height for motion detection.

### Solar Panel Extension Wire

This weather-tested 100-foot (30 m) wire easily connects a camera to its solar panel at sites where the panel needs to be placed in a different location in order to receive adequate sun exposure. Custom length cut available.

### Directional Antenna

For areas lacking adequate cellular coverage, the Directional Antenna boosts the cellular signal to increase data speeds for faster retrieval of information from the camera site.
